

Heinz Metrosan Donradt Siahaan

Senior .NET Developer

+62 857 7888 9852 | heinzmdsiahaan@gmail.com

SUMMARY

I am an experienced .NET Developer in the Financial Industry, passionate about the intersection of business and technology. I am a quick learner and enjoy tackling challenges that push me beyond my comfort zone. I thrive in projects requiring continuous learning of new technologies, contributing to organizational success.

Specialties

- Designing and implementing API endpoints with a focus on security and efficiency
- Applying security and data-protection best practices
- Leading technical and architectural designs with a focus on maintainability, performance, and security
- Conducting code reviews and defining guidelines for code quality
- Mentoring and leading junior developers in technical growth and project execution
- Collaborating across teams to deliver efficient technical solutions
- Working with core applications in the financial sector, ensuring optimal performance and reliability

Industry Experience

- Experience in various domains: Financial Services, Health Care, government organizations

TECHNICAL STACKS

- Languages: C, C++, C#, Javascript (HTML, CSS, Tailwind, etc.), SQL, Python, R
- Desktop application: Winform, WPF
- Web application: VB.Net, ASP, ASP.NET, ASP.NET MVC, Web API, .NET Core
- Package management: NPM, Nuget, NodeJS, WebPack
- Database: SQL Server, MySQL, SQL Lite, Oracle, MariaDB
- Data Warehouse: SSIS, SSAS
- ORM: Entity Framework, Dapper
- Reporting: SSRS, Crystal Report
- Azure: Azure Active Directory
- AWS: Lambda, S3
- CICD: Git, Jenkins, SonarQube, TFS
- Testing: Postman
- IDE: Visual studio, Visual studio code, PyCharm, R Studio, Jupyter Notebook
- Architecture tools: Enterprise Architect, Visio, Powerpoint, etc.
- Coding principle: Clean architecture/clean code, follow best practices, design pattern, apply coding principles: SOLID, etc.
- Architectural patterns: MVC, MVVM, MVP, MVP-VM, MVP+C
- Methodology: Waterfall, Agile, Scrum/Scrum of Scrums

EDUCATION

- Data Science Academy Fullstack
Algoritma Data Science School – 2023, Jakarta
- Bachelor of Computer Science
Binus University – 2010, Jakarta

WORKING EXPERIENCE HIGHLIGHTS (The Software Practice Pte Ltd)

Health Science Authority

Project: DASH Portal (*Mar 2026 – Now*)

Design & implement web application portal for Health Science Authority Authority.

Roles: Senior .Net Engineer

- Designing, documenting, and implementing efficient API endpoints
- Implementing security and data-protection best practices
- Driving key technical and architectural decisions with a focus on maintainability, performance, and security
- Conducting code reviews and ensuring best practices in development

Singapore Land Authority

Project: LEAP Portal (*Nov 2024 – Mar 2026*)

Design & implement web application portal for Singapore Land Authority.

Roles: Lead Backend Developer

- Led the development and ongoing maintenance of the Singapore Land Authority's Land Enhancement Administration Portal (intranet and internet), modernizing government land sales and lease management using C#, EF Core, ASP.NET (Razor Pages), MySQL, Alpine.js, Tailwind CSS, and AWS.
- Drove the integration of third-party services to enhance system capabilities and interoperability.
- Achieved over 80% code coverage by implementing unit testing with Moq, leveraging mocking techniques to isolate dependencies and improve test reliability.
- Produced comprehensive documentation, including sequence diagrams, to clearly communicate system design and implementation to stakeholders.
- Designed and maintained multiple background workers, scaling functionality alongside evolving business logic and integrating additional microservices.
- Mentored junior developers through guidance and code reviews, ensuring adherence to best practices and supporting their professional growth.

Project: PLUS Portal (*Sep 2022 – Nov 2024*)

Design & implement web application portal for Singapore Land Authority.

Roles: Lead Backend Developer

- Designing, documenting, and implementing efficient API endpoints
- Implementing security and data-protection best practices
- Driving key technical and architectural decisions with a focus on maintainability, performance, and security
- Conducting code reviews and ensuring best practices in development
- Achieved over 80% code coverage by implementing unit testing with Moq, leveraging mocking techniques to isolate dependencies and improve test reliability.

WORKING EXPERIENCE HIGHLIGHTS (Asuransi Astra)

Project: Beyond Insurance Core System *(Jan 2013 – Aug 2022)*

Migrate the existing system to a comprehensive platform designed to streamline and automate insurance operations. It covers end-to-end policy management, claims processing, billing, customer service, and underwriting. With integrated fraud detection, compliance features, and reinsurance management, it ensures smooth and secure processes. The system also offers robust customer and agent portals, enabling self-service capabilities and real-time updates. Advanced analytics, reporting tools, and AI-driven risk assessment provide insights into business performance and decision-making. Built for scalability and efficiency, it empowers insurance companies to improve operational efficiency, enhance customer experience, and ensure regulatory adherence., including:

- Allows for the creation and issuance of new policies, including both individual and group insurance.
- Facilitates policy changes such as adding benefits, adjusting coverage limits, or updating customer details.
- Automates policy renewals and provides alerts for policies nearing expiration.
- Tracks historical changes to policies for auditing and legal purposes.
- A streamlined system for submitting and processing claims with options for automatic claim approval based on predefined rules.
- Provides real-time updates on claim statuses for both customers and internal staff.
- Includes built-in fraud detection algorithms to flag suspicious claims for further investigation.
- Generate comprehensive reports on claim trends, payouts, and unresolved claims.
- Automates the calculation, generation, and distribution of premium invoices, including installment plans.
- Supports integration with various payment gateways to enable real-time premium payments.
- Automatically sends reminders for overdue payments and tracks collection efforts.
- Automates calculation and disbursement of commissions to agents and brokers.
- Centralized customer database storing all relevant personal, policy, and claims data.
- Allows customers to manage their policies, file claims, and check claim statuses via an online portal.
- Automated communication via email or SMS for notifications, such as policy renewals or claims updates.
- Provides insights into customer behaviors, preferences, and retention patterns.
- Leverages predefined rules and AI algorithms to assess the risk of potential clients automatically.
- Manages the entire underwriting process from submission, assessment, to final approval.
- Assigns risk scores to clients based on their profile, claims history, and other risk factors.
- Automates reinsurance contract management, including quota share, excess of loss, and proportional reinsurance.
- Automatically calculates premiums for ceded risks.
- Tracks claims that need to be passed on to reinsurance partners.
- Ensures that policies and processes adhere to local regulatory requirements, etc

Roles: Technical Expert

- Defined and developed guidelines to ensure code quality
- Developed, maintained, and enhanced core application systems based on Business Requirement Definitions
- Conducted internal application testing and created Technical Specifications
- Collaborated with teams to deliver advancements and solutions
- Mentored and led junior developers
- Technologies: C#, .Net, MVP+C, BITS, K2 Blackpearl, TFS

WORKING EXPERIENCE HIGHLIGHTS (Victorindo Abadi Solusindo)

Project: Core System Beyond (*Feb 2010 – Dec 2012*)

Roles: .NET Developer

- Offered efficient project assistance to the development team
- Crafted national-level insurance enterprise software
- Addressed bugs for requirements that did not meet user standards
- Implemented enhancements based on pre-approved requirements
- Produced documentation for developed software
- Technologies: C#, .Net, MVP+C, BITS, K2 Blackpearl, TFS
